

## **MOSQUITO BRIQUETTES**

### **Floating Sustained Release Larvicide**

- FOR LONG TERM CONTROL OF MOSQUITO LARVAE
- BIOLOGICAL MOSQUITO CONTROL
- FLOATING DONUTS LAST UP TO 30 DAYS

**Product # 5116**

**FOR PROFESSIONAL USE ONLY  
CONSULT LABEL AND MSDS BEFORE USING.**

### **MOSQUITO BRIQUETTES**

#### **Floating Sustained Release Larvicide**

Mosquitoes have always been an annoying and sometimes deadly aspect of summer and with the recent spread of the ZIKA VIRUS there has been a heightened interest in mosquito control throughout the United States. Cities, Counties, Municipalities, School Districts and Commercial businesses looking for a safe, nontoxic way to control mosquitoes can now use MOSQUITO BRIQUETTES, which kill mosquitoes before they can become flying, biting, disease-carrying adults. MOSQUITO BRIQUETS can be used in all types of mosquito breeding areas and can also be used as a pre-flood treatment. Simply place MOSQUITO BRIQUETS in areas that are prone to flooding to prevent breeding of mosquitos. These small, beige disks float on standing water where Mosquitos live and breed. As it slowly dissolves, it releases a bacterium which is toxic to all species of mosquito larvae. The active ingredient in MOSQUITO BRIQUETTES is Bacillus thuringiensis subspecies israelensis. (BTI). BTI is deadly to mosquito larvae but harmless to other living things. This product is deal for controlling the spread of these disease carrying pests.

#### **DIRECTIONS FOR USE:**

Just float a biodegradable MOSQUITO BRIQUETTE in water troughs, koi ponds, birdbaths, rain barrels or any place where water collects and remains for periods of time.

| <u>Surface Area</u> | <u>Use Quantity.</u>     |
|---------------------|--------------------------|
| 1 - 5 Sq. ft        | 1/4 Briquet              |
| 5 - 25 Sq. ft       | 1/2 Briquet              |
| 25 - 100 Sq. ft     | 1 Briquet                |
| Over 100 Sq. ft     | 1 Briquet per 100 Sq. ft |

### **Additional Information**

When female mosquitoes lay their eggs in standing water treated with a MOSQUITO BRIQUETTE, the larvae will hatch and begin to eat the BTI. The BTI will kill the mosquito larvae before they can grow up to become biting and disease-spreading adults. How do MOSQUITO BRIQUETTES work? While floating, this unique product slowly releases a long-term biological mosquito larvicide at the water's

surface. This larvicide gradually settles in the water, and while it travels through the water it is eaten by the mosquito larvae growing there. What kinds of mosquito larvae will a MOSQUITO BRIQUETTE kill? There are approximately 2,500 species of mosquitoes throughout the world. The active ingredient in MOSQUITO BRIQUETTES will kill the larvae of ALL SPECIES of mosquitoes. Each MOSQUITO BRIQUETTE will effectively treat 100 square feet of surface water for 30 days or more. Ideal for use in swamps, fragmented puddles, trash dumps containing water, or water with a high concentration of organic material.

The active ingredient in MOSQUITO BRIQUETTES, is very target specific for mosquitoes and does not adversely affect other organisms in the water. This product is also safe for use around birds, wildlife, children and pets. MOSQUITO BRIQUETTES can be stored indefinitely because, technically speaking, the dried BTI in MOSQUITO BRIQUETTES is not living, viable bacteria. (The toxicant that kills mosquito larvae is actually part of the BTI spore). Additionally, alternate wetting and drying will not reduce the effectiveness of MOSQUITO BRIQUETTES.
