Product # 70432 BOTTLES

**FOR PROFESSIONAL USE ONLY**  
CONSULT LABEL AND MSDS BEFORE USING.

**ROOT-OUT**

**SEWAGE LINE MAINTAINER FOR TREE ROOTS**

**ROOT-OUT** ready-to-use sewage line maintainer is in a special crystal form that contains copper sulfate pentahydrate. These easy to use crystals slowly dissolve and release into the sewage line providing convenient, no mess control of roots which can clog sewer pipes and storm drains. Simple application helps maintain sewage lines and keeps storm drains flowing and free of organic wastes, grasses, etc.

**DIRECTIONS FOR USE:**

**ROOT-OUT** can be used to help maintain sewage lines free from tree roots and natural obstacles. Simply shake approximately 2 cups of crystals down into the drain line that has a problem with clogging.

Then run the water and use the drain as always. **ROOT-OUT's** designed crystal shape will slowly dissolve and release into the sewage line and help maintain your drains. Once the drain has been cleared with an initial heavy dose (approximately 2 to 3 times the above stated amount), **ROOT-OUT** should be used only once or twice a week to insure obstacle free drain pipes.

**Additional Information**

**ROOT-OUT** Sewage Line Maintainer is a unique product designed to maintain drain lines blocked by tree roots, organic wastes and grasses. Tree roots and grasses finding their way into sewer pipes is a difficult problem to solve. Generally, the fastest remedy is to call a sewer contractor to come out and run the line with a special snake with cutting blades attached that cuts all the roots. Potential problems with this method are that the roots that are cut away will usually create a clog that may be impossible to remove and any weak areas of your sewer line can be easily broken with this type of equipment. As you can see so far, tree root control can be expensive. Sewer contractors can charge thousands of dollars to cut, clear and repair root damaged sewer lines. **ROOT-OUT** is the preventive method that avoids costly service calls due to damaged lines. Use this product to cause the roots to pull away from drains and look for water in the soil instead. Field studies have proven the effectiveness of **ROOT-OUT** treatments, in fact, two periods of treatment each year will keep tree roots and grasses away from drain lines and maintain free flowing sewers for months. **ROOT-OUT** is recommended as a follow-up treatment after cutting roots to prevent rapid regrowth.
