SELECT-KILL

**High Concentration Herbicide
MSMA Liquid for Post-Emergent
Weed Control**

ACTIVE INGREDIENTS	%
Monosodium Acid Methanearsonate*	34.8%
Inert Ingredients:	65.2%
*Total Arsenic (as elemental) all in water soluble form	16.1%

Product contains 4.00 lbs. M.S.M.A. per gallon.

Product # 5074

FOR PROFESSIONAL USE ONLY
CONSULT LABEL AND MSDS BEFORE USING.

INGREDIENTS	CAS NUMBER
MONOSODIUM ACID METHANEARSONATE	75-60-5

SELECT-KILL Concentrated Herbicide is an effective way to control post emergent weeds. This product is designed to KILL certain types of common weeds while causing little to no damage to lawn grasses. The concentrated formula not only makes **SELECT-KILL** effective but also very economical to use. For maximum effectiveness, use SUPERCO'S special surfactant additive **SUPER-WET** whenever using herbicides and pesticides when super-penetration is desirable. Contact your local **SUPERCO** representative for more information on our performance grounds care products.

SELECT-KILL is very useful for selective post emergent weed control, particularly for grassy weeds. Its activity is enhanced by the addition of a suitable surfactant (**SUPER-WET**) to the spray solution. **SELECT-KILL** is most effective on young, actively growing weeds at air temperature above 70° F. Its phytotoxic properties are quickly inactivated on contact with the soil.

DIRECTIONS FOR USE:

Not for use on turf being grown for sale or other commercial use as sod, or for commercial seed production, or for research purposes.

MIXING INSTRUCTIONS: **SELECT-KILL** must be thoroughly dissolved. Fill the spray equipment reservoir about half full with water and add the required amount of herbicide and surfactant with agitation. Finish filling the reservoir with water and apply. After use, clean equipment thoroughly by flushing with water. Do not store spray solution in tank for a prolonged period. Do not apply with hose-end applicators. Do not apply this product through any type of irrigation system.

LAWN AND ORNAMENTAL TURF: **SELECT-KILL** is useful for the control of dallisgrass, sandbur, bahiagrass, nutsedge, barnyard grass, chickweed and wood sorrel with little or no injury to good lawn grasses. On new lawns, do not treat until after three mowings. Good grasses may be temporarily discolored. Zoysia, bluegrass, and Bermuda are quite tolerant. Do not use on St. Augustine, centipede or carpet grasses. Mow lawns 1 to 1½ inches high before treatment. Mix 2 fluid ounces (4 tablespoons) of **SELECT-KILL** and ½ fluid ounce (1 tablespoon) of a suitable surfactant in 5 gallons of water and apply to an area of 1000 square feet. Spray thoroughly to wet all undesirable plants. Repeat applications 10 to 14 days apart, may be needed for good control.

NON-CROP AREAS: **SELECT-KILL** is useful for controlling Johnsongrass, nutsedge, barnyard grass, and certain other weeds on drainage ditch banks, rights-of-way storage yards, and similar non-crop areas. Mix **SELECT-KILL** at a rate of 2 to 5 quarts plus 1 to 2 quarts of suitable surfactants in 100 gallons of water. Spray the unwanted vegetation thoroughly to just short of run-off. Any spray equipment that gives good coverage may be used. If regrowth occurs, reapply as required.
