Product # 7754

FOR PROFESSIONAL USE ONLY
CONSULT LABEL AND MSDS BEFORE USING.

SMOKE-OUT

AFTER FIRE ODOR CONTROL TOTAL RELEASE FOGGER

Once a fire has been put out and the mess cleaned up, finish the job by using **SMOKE-OUT FOGGER**. Smoke coming from an intense fire is under pressure and is forced deep into cracks and crevices, into and through porous materials. Smoke particles have an odor that haunts building owners long after clean-up particularly when humidity is high. **SMOKE-OUT FOGGER** will finish the job by removing the odor.

DIRECTIONS FOR USE:

1. Remove all debris and furnishings that are to be discarded before beginning treatment.
2. Close windows, doors and vents. In automobiles, turn on heating or air conditioning fans.
3. Place the can in a central location or pointed directly at the burned area on top of a protective sheet or tray.
4. Turn the cap upside down and press back on the top of the can until it locks into position. This will start the fogging action.
5. Vacate the area. Be sure to close the exit door or window as you leave. Allow the aerosol to dispense entire contents. At 75° F the aerosol fogger should discharge for about five minutes. The time will be less in higher temperatures, longer in lower temperatures.

| INGREDIENTS | CAS NUMBER |

Additional Information

Smoke from fires is one of the most difficult odors to deal with. **SMOKE-OUT** when used as directed and in sufficient amounts, will absolutely remove odors - even from charred wood and scorched rubber wiring! Unlike most SUPERCO deodorants, **SMOKE-OUT** is a strong product designed to combat strong odor problems - treat it with care and it will take care of your odor problem that no other deodorant product is capable of doing. **SMOKE-OUT** may also be used to kill such overpowering odors as decomposing bodies and flood residue. For more information contact your local **Superco Specialty Products** representative.
