SUPERCO

SPECIALTY PRODUCTS

SUPER GEAR LUBE

Lubricates and Protects
Gears, Chains
and Wire Rope

SUPER CONCENTRATED
WATERPROOF
WEATHER RESISTANT

Product # 1035 Aerosol
Product # 5125 Bulk

FOR PROFESSIONAL USE ONLY
CONSULT LABEL AND MSDS BEFORE USING.

SUPER GEAR LUBE

Concentrated Open Gear Lubricant

A true open-gear lubricant must withstand high friction and tooth pressure without displacement. The **STRINGINESS** of this product proves the characteristics necessary for film forming, long lasting, positive lubrication and rust protection.

USES:

Heavy duty road building machinery, trash collection and street cleaning machines, marine cables and winches, metal working presses, industrial calenders, textile and paper mill steam cans and presses, automatic car wash conveyors, etc.

DIRECTIONS FOR USE:

Aerosol: Press down valve to lay down a uniform film. Tilt valve forward for hard to reach areas. The product will shoot a jet stream of approx. 8 feet.

Bulk: Apply product liberally to all gear surfaces especially where there is metal to metal contact.

AEROSOL INGREDIENTS

ISOPARAFFINIC HYDROCARBON	64742-48-9
PROPYLENE GLYCOL MONOMETHYL ETHER	107-98-2
ISOPARAFFINIC HYDROCARBON	64742-46-7
HYDROCARBON PROPELLANT	68476-86-8

CAS NUMBER

BULK INGREDIENTS

PETROLEUM OIL MIXTURE	8002-05-9
ADDITIVES	N/A

Additional Information

Open gears, exposed chains, and wire rope are a few of the most difficult surfaces to keep properly lubricated. These areas combine severe weather and exposure environments with extreme operating conditions and heavy loads. For example, wire rope used on marine cranes and lifts, drive gears on heavy equipment used for road construction and street maintenance and industrial presses and shears place serious demands on the lubricant used. Conventional greases would not be able to provide the protection and durability necessary to keep this kind of equipment operational under these conditions. **SUPER GEAR LUBE** is a super concentrated, waterproof and weather resistant open gear lubricant that is formulated with special tackifiers to promote good adhesion and cohesion. With **SUPER GEAR LUBE**, as the gears move, part of the lubricant is transferred from one surface to the other to ensure that mating surfaces are properly coated. In addition, excess lubricant is carried by the machine's operation, gear to gear, throughout the system making it possible to lubricate areas that are difficult to access. **SUPER GEAR LUBE** aerosol is packaged in a high pressure can that will shoot a jet stream of approximately 8 feet giving the user the ability to hit hard to reach areas. For a demonstration of **SUPER GEAR LUBE** contact your local **SUPERCO** representative.
