INGREDIENTS	CAS NUMBER
WHITE COTE HTP	1314-13-2
HYDROCARBON PROPELLANT	68476-86-8

Additional Information

SUPER LUBE FOOD GRADE A Food Grade Grease is a unique product that features the load carrying ability and high temperature resistance normally associated with moly based lubricants, conveniently packaged in an aerosol spray can. **SUPER LUBE FOOD GRADE A** is USDA H1 approved for use in food processing areas where incidental food contact is possible. This makes it the ideal spray lubricant to be used in a wide range of industrial operations that deal with any type of food related manufacturing, preparation, processing or packaging. In addition, plants involved in the manufacturing of food handling equipment, such as vending machines and restaurant equipment, would use **SUPER LUBE FOOD GRADE A**. Even though there may not be any food items present in the equipment manufacturing process, when the equipment goes into service, and the food is present, the lubricant used at the factory needs to be food grade. **SUPER LUBE FOOD GRADE A** also features a high level of purity which makes it ideal for production plants that manufacture hospital and pharmaceutical equipment. Contact your local **SUPERCO** representative for a demonstration of **SUPER LUBE FOOD GRADE A**.
