Glass, Plastic & other surfaces

Product # 7489

FOR PROFESSIONAL USE ONLY
CONSULT LABEL AND MSDS BEFORE USING.

SUPER SHIELD

ANTI-GRAFFITI PROTECTION

SUPER SHIELD is SUPERCO's latest addition to our graffiti protection line. **SUPER SHIELD** will not allow paint, ink, and markers to adhere to the coating. When graffiti appears, simply spray with Superco's Foaming Hurricane degreaser/cleaner and wipe away. **SUPER SHIELD** has a durable bond that ensures long lasting protection. **SUPER SHIELD's** film withstands a wide variety of stresses such as extreme temperature cycling, UV rays, and a wide range of aggressive chemicals, paints, and acids. **SUPER SHIELD's** UV-stable, PTFE film offers a permanent alternative to conventionally etched films due to a patented plasma surface modification. The process creates a permanent, chemical covalent bond between the PTFE film and adhesive while retaining the full transparency of the film. The bond is permanent, enabling it to be used in surface protection applications where currently available film products may fail. After application, **SUPER SHIELD** can withstand temperatures from -20⁰ to 200⁰F making it ideal for both hot and cold temperature conditions.

INGREDIENTS	CAS NUMBER
FEP COPOLYMER (Fluorinated Ethylene Propylene Copolymer)	25067-11-2

Additional Information

SUPER SHIELD ANTI-GRAFFITI PROTECTION film is offers superior adhesive technology for easy, peel-and stick installation by existing maintenance crews. **SUPER SHIELD ANTI-GRAFFITI PROTECTION** film is ideal for use in new construction or ongoing maintenance programs. **SUPER SHIELD** is designed to meet the requirements to comply with the FDA's Register of Food Additive Regulations. **SUPER SHIELD** film is 24" wide, the adhesive thickness is 2-4 mil PSA, and the film thickness is 3 mils. One roll can protect up to 12 24"x24" road signs. **SUPER SHIELD** is an excellent performer in outdoor environments, is permanently UV stable and offers anti-corrosion and anti-fade protection which increases the life of the sign. Unlike some manufacturers that use polyester in their protective films, **SUPER SHIELD** is made with PTFE so paints, inks, markers, etc will bead up and will prevent obstruction of the sign. Also, graffiti removal chemicals are not necessary to clean off the graffiti off which is necessary with some competitors products. **SUPER SHIELD** optically clear film offers easy installation and can be easily applied by hand or standard lamination equipment. The film is easy to cut and match the size and shape of the desired surface area, does not require primers or hazardous solvents, and the solid sheet designs assures consistent coverage, even on edges, angles and corners. for more information on **SUPER SHIELD**, contact your local Superco Specialty Products representative.
