

The YES Company!!

SUPER-WET
Soil Penetrant
Wetting Agent

- BIODEGRADABLE, ORGANIC SOIL WETTER AND PENETRANT
- FOR HARD SOIL IN PLANTED AREAS
- FASTER PENETRATION TO GREATER DEPTH
- MAINTAIN OPTIMUM WATER CONTENT LONGER

Product # 5021

FOR PROFESSIONAL USE ONLY
CONSULT LABEL AND MSDS BEFORE USING.

INGREDIENTS CAS NUMBER
ISOPROPYL ALCOHOL 67-63-0

SUPER-WET Soil Penetrant is recommended for use on soil and turf to promote water distribution and penetration. When used as directed **SUPER-WET** will have the following results:

- Plant food will become more available.
- Thickly matted turf will absorb more water more readily.
- On watering, excess salts will be removed.
- In heavy Adobe and expandable clay soils, water will penetrate more uniformly and water buildup will be prevented.
- When used with fertilizers, distribution will be more uniform.
- Water penetration will be improved and non-wettable solid will absorb water.
- **SUPER-WET** will aid in the prevention of water erosion.

DIRECTIONS FOR USE:

For best results, apply **SUPER-WET** from a tank sprayer, liquid proportioning sprayer, or automatic proportioning sprinkler or irrigation system.

Compacted or Hard Soils: Apply at a rate of 1 pint to 50 gallons of water (400:1) for each 1000 sq. ft. treated. Water heavily after application at least 20 minutes, and then continue normal watering procedures. On slopes, water lightly several times daily to get penetration without run-off. To keep soil open, occasionally apply at a rate of 1 pint per 100 gallons (800:1) for each 2000 sq. ft.

Use with fertilizers, insecticides, and weed killers: Add 1 quart to 50 gallons (200:1) of applied solution.

For dry materials: such as mulch, peat moss, or steer manure, use 1 quart to 25 gallons of water (100:1) and wet either before or after application.

Planting: Make a solution containing one pint to 25 gallons of water (200:1) and use as follows;

Bulbs: Soak approximately 10 minutes before planting.

Germination of seeds and bulbs: To expedite germination spread lightly over seed areas.

Planting trees, bushes and other plants: Before planting make a shallow hole about twice the dimension of the hole to be dug, add solution until about 6 inches seeped into ground.

Potted plants: Add one drop to each cup of water.

Additional Information

Water is a precious resource that should not be wasted but conserved and maximized. **SUPER-WET** simply put, makes water wetter. More of the benefits water gives while using less water to achieve the results you desire. Much of the water used for irrigation evaporates before it ever gets into the soil, a total waste. **SUPER-WET** makes the water penetrate much faster and much deeper to get the water where it is needed and help keep it there for a longer period of time. Virtually all pesticides, herbicides and fertilizers are either carried by or activated by water. Using **SUPER-WET** when applying these chemicals actually enhances their effectiveness. Weed killers kill faster and more completely, pesticides get deeper into small cracks and continue to work for a longer period of time, and plant food gets into the soil more completely so as not to get blown away with the wind. Consult with your **SUPERCO** representative for information on the many uses of **SUPER-WET** Soil Penetrant and Wetting Agent.
