TRUCK BED COATING

TRUCK BED COATING is a thick, durable black sealant that forms a protective skin that is both tough and flexible. Protects against corrosion and abrasion, withstands impacts, provides improved traction, and resists water. With its fast cure time and excellent adhesion, **TRUCK BED COATING** is convenient to use and will greatly extend equipment and vehicle life expectancy.

DIRECTIONS:

1. Surface must be clean, dry and free of rust before painting. Protect surrounding areas from spray mist. For best results, use when can is between 50°F and 90°F (10°C and 32°C.).
2. Shake can at least one minute after rattle is heard and occasionally during use.
3. Spray surface with steady even strokes at a distance of 8 to 10 inches (20 to 25cm). Several light coats give a better finish than one heavy coat.
4. If clogging develops, turn spray head 1/4 turn or remove and clean spray head slot. Do not stickpin or other objects into can opening. With can and spray head pointed away from you, reinsert spray head with a gentle twisting motion.
5. To clear spray head for future use, turn can upside down and spray for 3 seconds. Completely empty cans may be recycled or disposed of with regular trash. Dispose of partially empty cans responsibly. DO NOT incinerate or compact.

Additional Information

SUPERCO's Truck Bed Coating is the most durable product of its type. This remarkable coating dries quickly and stays flexible making it ideal for truck beds, cargo van floors, trailer decks, truck & trailer frames, boat decks, stake-bed decks, lift-gate platforms, utility boxes, bumpers, roll-cages, handicap lifts, machine

room floors, drip pans, cover plates, engine compartments, wheel wells or to repair existing truck bed linings. **Truck Bed Coating** is a durable, weather and abrasion resistant coating ideal for virtually any surface. The semi-matte black textured finish looks great and is easy to apply. This coating is thick and covers completely. The fast drying feature means that the coating is less likely to drip and run before drying. Metal surfaces can be coated without the need for a primer coat.
