

CT-7
Cooling Tower
De-scaler

- Special Color Indicator.
- May be used in all Firetube, Watertube, Hot Water Boilers & Cooling Towers.
- Contains Organic Chelating Acids.

Product # 5103

FOR PROFESSIONAL USE ONLY
CONSULT LABEL AND MSDS BEFORE USING.

INGREDIENTS
PHOSPHORIC ACID

CAS NUMBER
7664-38-2

CT-7

LIQUID ACID CLEANER & DESCALER

CT-7 is an inhibited liquid acid cleaner, designed for use whenever water scale, light rust, or protein deposits must be removed. It mixes instantly in water, gives off no objectionable fumes and rapidly penetrates rust scale. It is inhibited to minimize attack on steel, stainless steel, metal, copper, bronze and aluminum. It contains organic chelating acids.

CT-7 contains special color indicator which changes color of the cleaner as it is expended when removing scale. The distinct color changes quickly indicating the loss of solution strength, so that solution may be boosted or as an indicator that descaling has been completed.

DIRECTIONS FOR USE:

Use 1 gallon **CT-7** for every 25 gallons of water as a general recommendation. Severely scaled equipment may require a stronger dilution ratio.

When solution is working the color is red. When weakened, color is green and additional should be added.

CT-7 is powerful. It dissolves the carbonates which hold scale and other deposits together. After the carbonates are dissolved, the sulfated, iron, calcium, (lime), magnesium and other insoluble materials fall away.

CT-7 is safe. It may be used in all fire-tube, water-tube, hot water boilers and cooling towers. Safely cleans and entire cooling system. It is harmless to most paints, finishes, and metals.

Additional Information

CT-7 Cooling Tower Cleaner & Descaler is a unique product designed specifically for removing mineral deposits and build-up from cooling towers. **CT-7** is effective and easy to use. Simply add 1 gallon of **CT-7** for every 25 gallons of water in the system and run the cooling tower. After a few cycles, drain the water, rinse and refill. This periodic maintenance removes scale and build up and helps the cooling tower operate at peak efficiency. **CT-7** is an important part of your cooling tower preventive maintenance program.
